POSSIBILITES

PERFECT PROTECTION

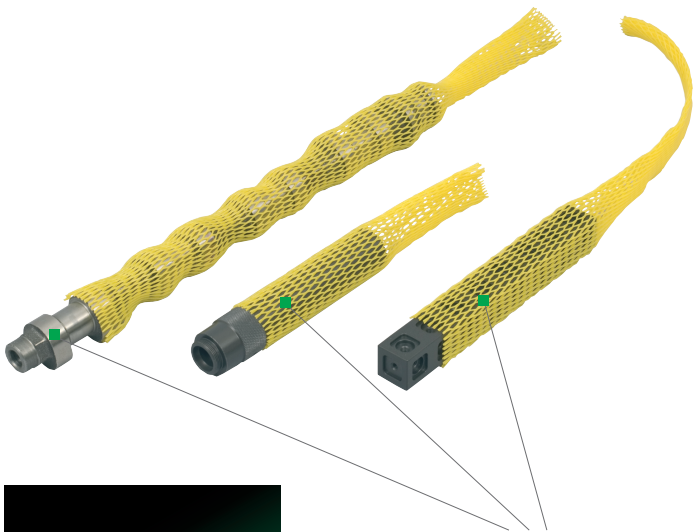

**SURFACE**  
PROTECTION  
TECHNOLOGY

**Effective protection against damage during production, cleaning, storage and transport – this is what the surface protection sleeves, protective net caps and net mats from norelem offer.**

The flexible, reusable polyethylene, polypropylene or polyamide protective sleeves easily adapt to the specific component. They are resistant to permanent deformation and can therefore be reused even with differing component geometries - including in medical technology.

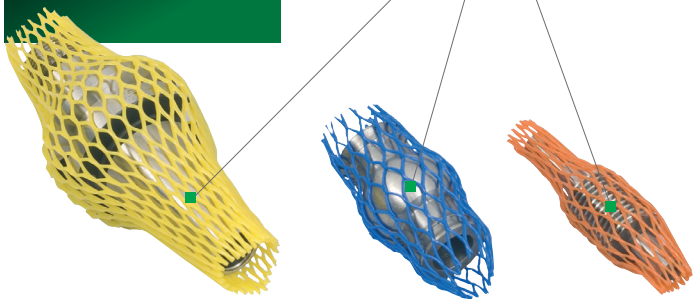

The net sleeves are simply slipped over the components without any additional aids and do not have to be removed for cleaning or disinfection.

The heavy metal and plasticiser free protective netting is impervious to many greases, oils, acids and solvents. They can therefore be cleaned quickly and easily with standard cleaning agents. The mesh structure allows air to circulate, thus preventing moisture build-up and simultaneously enabling the protected products to be clearly identified.

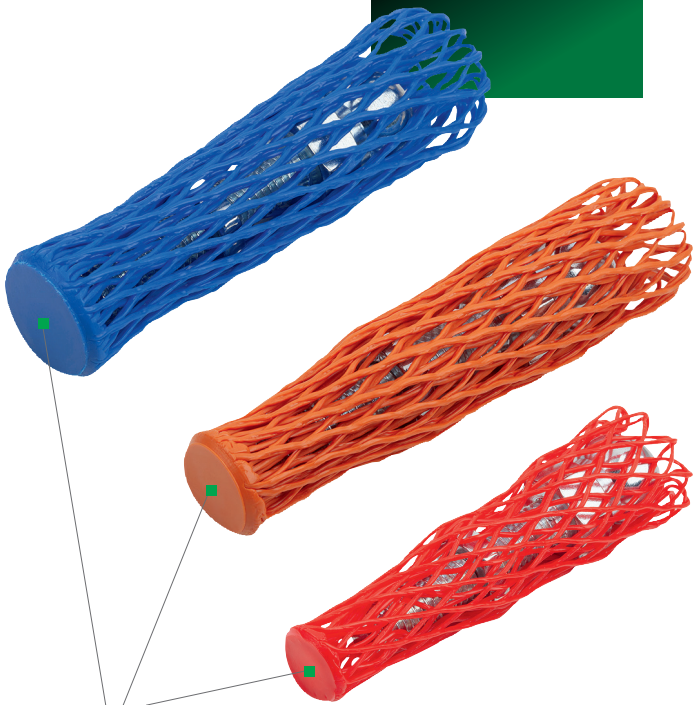

**we resist  
slight  
bumps and  
scratches.**

**Net sleeves**  
Effective protection

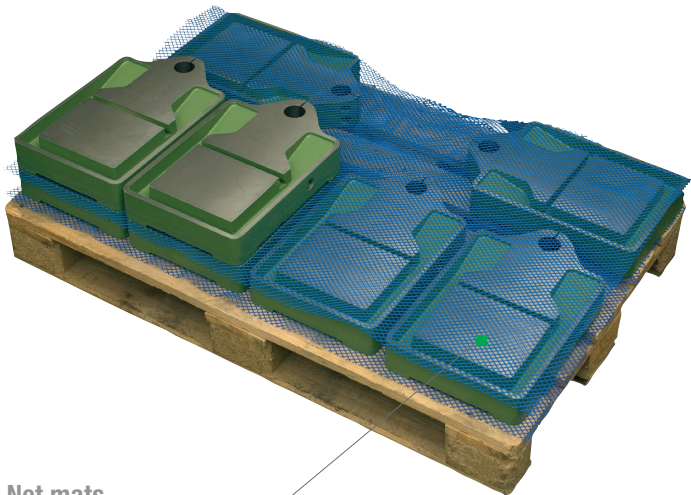

end to end  
protection.

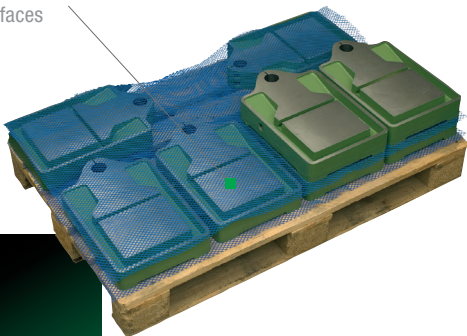

**Plastic protective net caps**

Easy handling

## Net mats

Effective protection for surfaces and delicate goods.

us.**

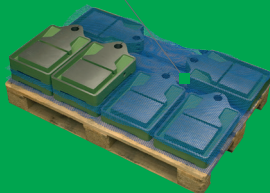

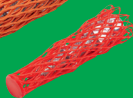

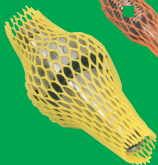

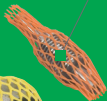

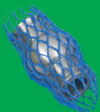

# PERFECT PROTECTION

norelem SURFACE PROTECTION TECHNOLOGY.

By using norelem surface protection sleeves, protective net caps and net mats, even products and components with sensitive surfaces can be easily and closely stacked, saving space.

Perfect protection!
